INTERCONNECTION STANDARDS FOR INVERTERS

SIZED UP TO 100 KVA

Exhibit B – Certificate of Completion

Customer Requirements "Checklist"

Please provide the following '**Post-Installation'** documentation with your Exhibit B – Certificate of Completion.

Any Exhibit B – Certificate of Completions submitted without the appropriate documentation will be delayed in processing and/or returned.

☐ Upon completing construction, the facility shall be inspected and certified by the local electrical wiring inspector with jurisdiction. In the event the municipality does not have an inspector, a New Hampshire licensed electrician can inspect and certify the facility in accordance with section ***Puc 904.05 Installation and Interconnection of Facility.***

Submit 'as-built' digital photos to Eversource which clearly show the following:

☐ The Eversource revenue meter (meter number must be clearly readable).

☐ The inverter(s). If micro inverters are used, submit a photo of the entire array instead.

☐ The external manual disconnect switch (*if required*). Please refer to Part PUC 905 Technical Requirements For Interconnections For Facilities, PUC 904.01 Requirements For Disconnect Switches and 905.02 Disconnect Switch and/or your processed Application.

☐ The main distribution panel showing the point of interconnection (backfeed breaker). **Note:** If the point of interconnection is via a line side tap, the cover shall be off of the panel and or junction box. Under no circumstances shall the point of interconnection be made within the meter box, nor shall the meter box be used as a pass through for any other conductors.

Upon receipt of all required documentation Eversource will within ten (10) business days; 1) schedule a witness test unless otherwise waived (please review the attached Terms and Conditions for Simplified Process Interconnections to determine whether Eversource has waived the right to inspection), and 2) schedule the installation of a Net Meter.

Once all requirements and conditions have been met, Eversource will provide written notification, authorizing the interconnection of your project to the Eversource electric distribution system and confirming your status as a net metered customer in our customer billing system.

Note: Eversource shall not be responsible for improper billing that may result when a customer operates their generator prior to the installation of the appropriate Net Meter.
